

Customer & MVP Blueprint

VisualLearn India — Interactive Visual E-Learning Platform

Market: India | Stage: Pre-Validation | Date: June 2025

01 Executive Summary

Startup Idea	A gamified, visual e-learning platform that teaches concepts through interactive animations, simulations, and visual storytelling — replacing passive video/text learning.
Problem	E-learning platforms in India rely on static videos & PDFs. Students disengage quickly. Platforms lack funds & technology to build immersive interactive content at scale.
Target Customer	B2B: EdTech platforms (BYJU'S, Unacademy, regional players) + B2B2C: Schools, coaching institutes, and colleges across India seeking engagement-boosting tools.
Market	India — 250M+ online learners, ₹7,500 Cr EdTech market growing at 39% CAGR. Government push for digital education via NEP 2020 creates strong tailwind.
Validation	■■ Zero validation done. No surveys, interviews, pilots, or revenue. High-risk pre-idea stage — immediate research sprint required before any development.

02 Ideal Customer Profile (ICP)

Segment	EdTech Platform (B2B — Primary)
Company Size	10–500 employees; ₹1Cr–₹50Cr ARR; Series A or bootstrapped
Geography	Tier 1 & Tier 2 cities India: Bengaluru, Mumbai, Delhi, Hyderabad, Pune, Jaipur
Decision Maker	CPO / Head of Product, CTO, Academic Head, Co-founder
Pain Trigger	Completion rates below 30%, student churn, low NPS, losing to competitors with richer UX
Budget Signal	Actively investing in content quality, UI refresh, or student retention tooling
Tech Readiness	Has LMS / app infrastructure; open to API/SDK integrations

03 Buyer Persona

■ Priya Sharma — Head of Product, EdTech Startup	■■■■ Arjun Mehta — Student (End User)
--	---------------------------------------

Age 28–38 | MBA/Engineering | Bengaluru Goal: Improve completion rates, reduce churn Frustration: Content is expensive to produce; engagement is low Buys when: ROI on retention is clear; easy integration; low risk pilot available Reads: Product Hunt, Inc42, LinkedIn EdTech groups

Age 14–25 | School / College | Tier 1 & 2 India Goal: Understand complex concepts faster, score better Frustration: Boring videos, can't visualize abstract topics Engages when: Content is game-like, interactive, shareable Channels: YouTube, Instagram, Discord study groups

04 Top 10 Customer Pain Points

#1	Low course completion: Avg. completion rate on Indian EdTech platforms is 15–30%. Students abandon passive content.
#2	Abstract concept comprehension: Topics like Physics, Maths, Coding are hard to grasp via text/video alone — need visuals.
#3	Content production cost: Interactive animations cost 5–10× more than video. Platforms can't afford it at scale.
#4	Student engagement drop-off: Attention span is 6–8 mins. Static content loses students after first session.
#5	No personalized learning paths: One-size-fits-all content ignores learner pace, style, and gaps.
#6	Poor mobile learning experience: 60%+ users on mobile — most interactive content is desktop-first and clunky on phones.
#7	Weak retention & re-engagement: No mechanism to bring students back; push notifications alone fail.
#8	Assessment feels like a test, not learning: Quizzes are disconnected from the learning flow — students see them as punishment.
#9	Lack of progress visibility: Students can't see how concepts connect — no knowledge graph or visual progress map.
#10	Platform differentiation problem: All EdTech platforms look the same. No unique visual identity or UX innovation.

05 Customer Journey Map

■ Awareness	■ Consideration	■ Purchase	■ Retention
Platform CPO sees low completion stats Reads Inc42 / LinkedIn article on interactive learning Discovery via EdTech conference / cold outreach	Requests a demo or pilot Evaluates integration effort (API / SDK) Compares pricing vs content production cost saved	Signs 3-month pilot for 1 course Onboards 1 content team member First interactive module goes live	Tracks engagement uplift (time-on-task, completion) Expands to 5+ courses Refers other EdTech peers

06 Key Objections & Buying Triggers

■■ Key Objections	■ Buying Triggers
• "How does this integrate with our LMS?" • "Is it mobile-optimised for low-bandwidth India?" • "What's the content migration effort?" • "We have no budget for new tools right now" • "Our devs are already stretched thin" • "We tried gamification before — it didn't stick"	• Proven completion-rate uplift data (even 20% matters) • Plug-and-play SDK — zero migration needed • First pilot free or heavily subsidised • Student testimonials / NPS improvement • Competitor platform already using it • Government/NEP alignment for institutional buyers

07 MVP Recommendation

■ Build First	1 interactive visual module player (web + mobile) • 3–5 concept types: timeline, process flow, comparison, formula visualiser, drag-to-learn • Embeddable SDK / iFrame for existing LMS platforms • Basic analytics dashboard (time-on-task, completion, drop-off heatmap)
■ Do NOT Build	Mobile app (too early) AI personalisation (premature) Custom authoring tool for clients Marketplace Offline mode Native iOS/Android
■ Success Metrics	• 3 paying EdTech pilots within 60 days of launch • Course completion rate uplift $\geq 20\%$ vs platform baseline • Avg. session time > 7 minutes on visual modules • NPS from student users > 40 • Integration time < 1 day for LMS partners

08 MoSCoW Prioritization

■ Must Have	■ Should Have	■ Could Have	■ Won't Have (v1)
Visual concept player Embeddable SDK/iFrame Mobile-responsive UI Basic analytics 3 core interaction types	Authoring tool (basic) Progress tracking Multi-language support Low-bandwidth mode Admin dashboard	AI-generated hints Leaderboard / badges Parent/teacher view White-labelling Social sharing	Native mobile app AI content generation Marketplace Offline sync Peer collaboration rooms

09 Pricing Hypothesis

Tier	Model	Price (INR)	For Whom
Pilot	Free / Rev-share	■0 (3-month trial)	First 3 EdTech partners
Starter	SaaS — Per learner/month	■15–■30 / learner	Platforms <10K learners
Growth	SaaS — Flat monthly	■40,000–■1,20,000 / mo	Platforms 10K–1L learners
Enterprise	Annual licence + setup	■5L–■20L / year	Large EdTech / Institutions

10 Top 5 Risks

Risk	Level	Detail
■ No Validation	HIGH	No interviews, no pilots, no signal. The riskiest blind spot. Entire plan is assumption-based.
■ Tech Complexity	HIGH	Building real-time interactive visual content is expensive, complex, and slow. WebGL/Canvas dev costs can spiral.
■ B2B Sales Cycle	MED	EdTech platforms have long procurement cycles (3–9 months). Cash runway could be exhausted before first paid deal.
■ Competition	MED	Kahoot!, Genially, Instancy, and home-grown tools exist. Differentiation must be razor-sharp.
■ Bandwidth & Device	MED-LOW	Interactive content is data-heavy. India's Tier 2/3 students on 4G with 4GB/day limits may churn at high load times.

11 30-Day MVP Plan

Week	Focus	Actions
Week 1 Days 1–7	Customer Discovery	20 interviews: EdTech CPOs + students Map pain severity List 5 competitor tools Define unique value prop
Week 2 Days 8–14	Concept Validation	Build clickable Figma prototype of 1 visual module Get feedback from 5 EdTech contacts Shortlist 3 willing pilot partners
Week 3 Days 15–21	MVP Build Sprint	Build minimum embeddable player (HTML5/React) 2–3 interaction types only Connect to 1 pilot platform Basic analytics events
Week 4 Days 22–30	Pilot Launch + Learn	Go live with pilot partner Track completion vs baseline Collect NPS from 50+ students Prepare investor/partner deck with data

12 Founder Action Sheet — Top 10 Next Actions

01	Do 20 customer interviews this week Call/WhatsApp CPOs and students. Ask about engagement pain, tools tried, budget. No pitching.
02	Join 5 EdTech WhatsApp/Slack groups EdTech India communities on LinkedIn, Slack (EdSurge, Inc42). Listen before you pitch.
03	Build a Figma prototype (not code) 1 visual module — physics, maths, or coding topic. Show don't tell. Get it in front of 10 people.
04	Set up a landing page with waitlist Carrrd.co or Webflow. 1 headline, 1 GIF/video, email capture. Target: 100 signups in 30 days.
05	Identify 3 pilot EdTech partners Small platforms (1K–50K learners) are faster to decide. Offer free 3-month pilot.
06	Define your 1 differentiator clearly Not 'interactive learning' — be specific. e.g., 'Visual concept player that replaces lecture slides'
07	Research competitors deeply Kahoot!, Genially, Articulate, Instancy, iSpring, Coursemos — know their pricing and gaps.
08	Decide tech stack wisely React + Canvas/SVG for MVP. Avoid native apps, Unity, or WebGL until you have 3 paying customers.
09	Apply to EdTech accelerators Surge (Peak XV), Antler India, 100X.VC, Google for Startups India — for funding + network.
10	Track 3 core weekly metrics # customer conversations # prototype views # pilot interest confirmations. Review every Friday.

13 Blueprint Scores

Customer Clarity

52/100

Problem Severity

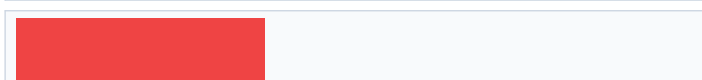

70/100

PMF Potential

58/100

MVP Readiness

35/100

■ Scores are based on provided inputs only. All four scores will improve significantly after completing 20 customer interviews and a validated prototype test.

14 Final Verdict

■ PROMISING BUT UNVALIDATED

The concept is relevant, the market is real, and the timing with India's EdTech boom is strong. However, zero validation has been done — no interviews, no prototype tests, no market signals. The idea must be stress-tested with real customers before a single line of code is written. Do the 20 interviews. Build the Figma prototype. Get 3 pilot partners. Then build.
